

UX Testing + UI Iteration

		User Interface: How could the styling of elements be changed to make a more visually appealing, clear, and space efficient layout? (ex: sizes, colors, fonts, alignment, etc.)	User Experience: What elements of the user experience could be improved to make the page more intuitive and more fun/satisfying? (ex: sounds, hover effects, press effects, etc.)
User 1 Name: Chiama I	<ul style="list-style-type: none">Change the beatle images on the homepage to be full lengthAdd a page to the explore buttonCenter the album and explore buttons horizontallyI like the flipping of the Beatles on the homepageThe scrolling function looks weird because its split into twoThe Album page is a bit congested visually - have two albums inside each section instead of 3 = 8 albums in total instead of 12The Beatles header img could be biggerThe Beatles image on the left of the album page leaves a lot of empty space below. Maybe find something to fill it or try to vertically center it	<ul style="list-style-type: none">The hover effects on the album page are interestingAdd a sound when you click an album, that could be interestingFix sizes of album and explore buttons for homepage in media query	
User 2 Name: Kelly A	<ul style="list-style-type: none">Get rid of the play and pause buttons because there is no functionality, and there might not be time to add audio, and it might be confusing to have an embedded video and audio playing at onceAdd a reset button because you cannot click anything else when you click the image of the BeatlesThere is nothing attached to the explore button, so maybe add a simple site to it	<ul style="list-style-type: none">Add a hover effect to the Beatles on the album pageMake the home button look nicer (change the font color or add styling to the button?)When you have an album selected, make the opacity of the said album lower so the user knows that's the one they just clicked	

<p>User 3 Name: Liyah E</p>	<ul style="list-style-type: none"> The half images on the home page of the beatles look weird when the site gets smaller and the album/explore buttons get cropped on the phone view, maybe add a media query to the home page or change the layout On the full size for the homepage, make the album and explore buttons centered Most of the embed videos don't work so find different embed link? Too many albums = overwhelming 	<ul style="list-style-type: none"> Remove or shrink the scroll bars for the album page on the tablet and desktop because it makes the page look kind of heavy Add a hover to the pause and play buttons on the album page and attach audio if there is time Add a hover to the respective image of the beatles for each album so users know you can click that Add a reset button so the user does not have to reload the page everytime they click the image for the embed video Make the colors more consistent because it feels like the album page has too many visuals and things going on
<p>User 4 Name: Lindsey G</p>	<ul style="list-style-type: none"> It might be confusing to have an embed video and a button that lets you play a song from each album so maybe if the user tries to click the play button have a popup that tells you that you have to pause the video to play the music(?) Or maybe get rid of either the embed or the pause/play completely The explore button does not lead to anything so you might want to get rid of it When the homepage shrinks the images become really small, so you might want to fix that in the media query for the home page Fix the images of the beatles on the album pages because they get cropped out in the media query 	<ul style="list-style-type: none"> Add a hover to the randomizer and pause/play buttons Remove or thin the border around the albums because it is visually heavy
<p>User 5 Name: Mario R</p>	<ul style="list-style-type: none"> Center the play/pause and random buttons on the album page Center the home button to the top of the div with the beatle image inside There is no beatle image for the Magical Mystery tour function There is no title image for the Please Please Me album function Some of the title images look weird on top of a pink 	<ul style="list-style-type: none"> Make the images of the beatles for the to be responsive for each view Layout of album is too cluttered and is overwhelming Reduce amount of albums for the album page Make color pallet of content of the page to reflect the album colors

background - make the colors more consistent? Or maybe make the background colors change with every album

- Make the color of the entire website consistent
- See if I can make each beatle images the same size
- Center each beatle image on the album page

UI Before Feedback (Screenshot / GIF)

What trends did you identify in your feedback?

- Add a working media query for the homepage because the album/explore buttons get cropped and the row of beatle images get small
- Add a reset button on the album page
- Add a function that will prevent the user from being able to play the iframe and the sounds at the same time
- Have less albums for less visual clutter (4 per each side)
- Fix embed video links
- More hover effects for clickable items
- Consistent colors
- Fix broken images and style the Home Button on the album page
- Have the explore button lead to a page
- Have a simple page for each beatle

Home

"A Hard Day's Night"

Arguably one of their most iconic albums!!

UI After Feedback (Screenshot / GIF)

What changes did you make to improve your UI?

- I reduced the albums and added a home button, additionally I fixed the sizes of images on the homepage and added content to the explore page
